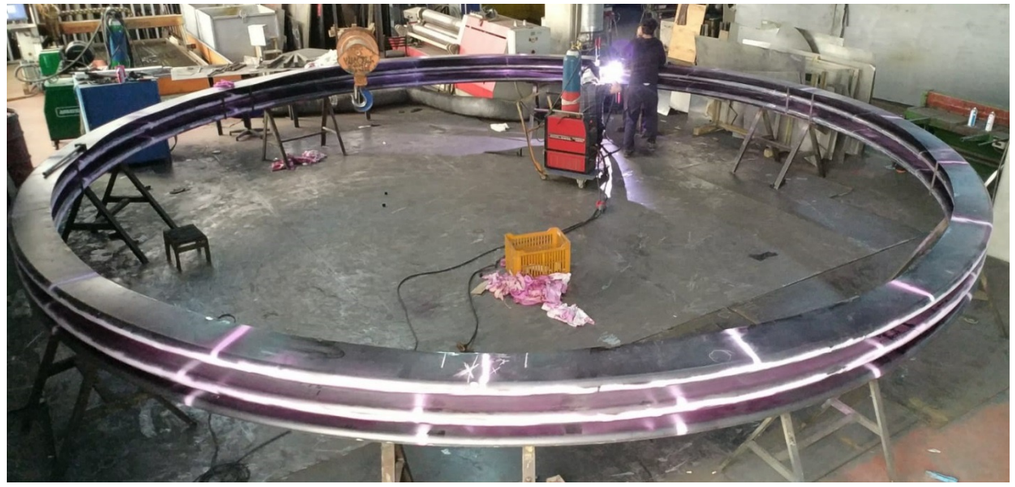
DN8000 Lens Type Expansion Joints



KLINGER Turkey manufactured DN8000 lens type of expansion joint. Lens type of expansion joints hold up very good against corrosion and mechanical damages. Drain couplings can be added on convolutions to drain condensate. This type of expansion joints can be manufactured from carbon steel material as well as various grades of stainless steel

Big Project for a Power Plant

18 pieces of DN2200 lens type and 10 pieces of rectangular type of large expansion joints were designed and manufactured by KLINGER Turkey
