DN400 Expansion Joint with Special Design

DN400 universal expansion joint, 1050mm overall length, with large movements and inner sleeve has a unique design to prevent inside medium to build up between bellows and inner sleeve. Flanges are drilled to provide a special solution and then nozzles are attached to spray this solution cleaning the space between inner sleeve and bellows. KLINGER Turkey provides custom designed solutions working together with you.

Outer Covers

KLINGER Turkey designed and delivered universal expansion joints with 310S and Alloy 625 bellows. All expansion joints have outer removable covers and inner sleeves. Outer covers protect bellows against damages such as shown below during shipping and installation. They can be removed for inspecting bellows and then be reinstalled.
